(54) Title: COMBINATION OIL RING

(54) 発明の名称: 組合せオイルリング

(57) Abstract: A combination oil ring that can provide, even when a coil expander formed from a shape memory alloy is used in it, sufficient tension and excellent oil scraping and oil controlling functions. A combination oil ring is constituted of an oil ring and a coil expander. The oil ring has a substantially letter I-shaped cross-section where two rails are connected by a column portion. The coil expander is provided in an inner peripheral groove formed in the inner periphery side of the column portion, pressing and urging the oil ring radially outward. The combination oil ring is characterized in that the coil expander is made from a shape memory alloy and formed in an irregular shaped wire with a rectangular cross-section.

* Special categories of cited documents:

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier application or patent but published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"&" document member of the same patent family
